About

I'm a experienced developer, operating on the entire software life cycle, from conception to a product release working with multiples programming languages. Currently, in love with NodeJS and all the Javascript World (FrontEnd & BackEnd). I like exploring other languages and approaches, so, I spend some time playing with Python, Arduino and Elixir/Erlang. I like the collaborative environments, test driven development, teamwork and modern software patterns. You can check my Github profile where you can find my personal projects.
